Madison Metropolitan School  
District

Kim Sveum  
Media Liason  
Dean Health Systems

Wilmot Valhmu  
WI Division of Public Health  
Immunization Program  
Advisor

**Location:**

Madison Water Utility, Conference Rm.  
119 E. Olin Ave  
Madison WI 53713

**Agenda:**

- DCIC Treasurer Report: \$20,029.99; no grant money left to spend down (~\$8,000 payments incoming); some upcoming expenses for lunch and learns with oral health providers
- Updates: Adult grant-summary, dental outreach in progress
  - **Grant:**
    - Inservices to dental providers re: HPV; lunches provided
    - received \$8,000 from State for Adult Outreach (used most of the funds for Imms Symposium)
    - discussing talking tips for oral health providers, providing brochures to parents, borrow slideset from dentist who presented at National Confernece.
    - Lunch and learns going well (done 5 already and have 10 more scheduled)
    - Focusing on: bringing up HPV when discussing oral cancer screening, adding HPV vaccination to medical screening form and checking for oral cancer (if not already doing so)
    - Over 800 oral health providers emailed; 771 received the email; 440 opened the email; 1<sup>st</sup> Choice Dental is providing lunch and learns to all facilities
    - Not much is being done nationwide re: oral health provider outreach
  - Reminders:
    - Grand Rounds will be held Dec. 12<sup>th</sup> @ St. Mary's Hospital and Dec. 13<sup>th</sup> @ UW; will be recorded and put on DCIC website; Dr. Edwards from Vanderbilt is guest speaking
    - Next Membership meeting is November 13-topics pending; lunch to be provided
- Influenza Vaccine 2018-19: Product Supply and Strategies
  - Sanofi: Ashley Zunstmann
  - Medimmune—Tracy Ginger
  - Seqirus: Allison Wright
  - GSK: Alan Barker
- Shingrix
  - Product efficacy data: 1 dose, interval variance: Wanda Conley (GSK Medical Science Liason)
  - Use and discuss supply, strategies for distribution

- Flu Updates
  - Sanofi Pasteur (Ashley)
    - >10% flu doses shipped
    - 1/3 pre-booked will be shipped by end of August
    - All flu options available for order
    - Express Order is an option-order now and receive within 2 business days
  - MedImmune (Tracey)
    - FluMist back on the market
    - Wait list for pre-book
    - CDC opened up additional VFC pre-booking; WI did not participate
    - Issues with flumist stemmed from replicated fitness of the H1N1 strain
    - Has a good match with this year's strain
    - Never lost FDA support (only ACIP recommendation)
    - Looking at September and October shipping dates
    - Since it is a live virus vaccine, there is an 18 week expiration date
      - Can return unused vaccine
    - Extra studies have been done and will be done for new strains
    - Can be given 2-49 y.o.
    - Don't need to sniff up/snort up nose; give hard push for mist; if don't push hard, get dribble-that's okay. Main point is that vaccine needs to touch mucosal membranes
    - Talking points for parents: VIS and other resources available
    - FluMist makes up about 12-15% of the flu vaccine market
      - 1.3 million private market; 700,000 VFC doses this year
  - Seqirus (Allison)
    - FluAd-adjuvanted, trivalent vaccine for older adults (>65yo)
    - Presentation re: FluAd
      - Includes strains A and B
      - Egg and GBS=contraindications
    - Common to see more redness and tenderness with adjuvanted vaccine over non-adjuvanted vaccine (traditional trivalent)
    - Persistence of seroconversion 12 months after vaccination
    - 25%+ decrease in hospitalization rates in one Italian study of older adults
    - Licensed in Europe and given preferential recommendation in UK
    - Working on quadrivalent formulation for 2019 flu season
    - Approved in 2015 in US
    - Cost is cheaper than hi dose flu & covered by Medicare
  - GSK (Alan)
    - Fluarix and Flulaval (quadrivalent; 0.5 mL for >6 months)
    - 100% vaccine will be shipped by end of September
    - FluLaval and Fluarix-over 5 million doses shipped
    - 100% of multi-dose vials will be shipped by August 31
- How to improve flu vaccine uptake with clients/members?
  - Universal standing orders
  - Nurse only visits

- After hours appointments
  - Meriter: After Hours (Sat/Sun-walk-ins); can get immunized for anything
  - Dean: Evening and Saturday morning appts; very busy and booked through September
  - Associated Physicians: has evening hours

Most organizations with very limited supplies of FluMist this year, some not carrying it this year due to VFC coverage issues

- Shingrix

Alan Barker, supply issues

- shipments every 2 weeks in limited doses. Significant increase in number of doses, shipping
- limited quantities through 2018 into 2019
- GSK has stopped advertising the product until supplies increase, focus on education

Wanda Conley, Medical Science Liaison, GSK

- provided limited data on small studies available regarding one dose protection and dose intervals greater than the recommended 2-6 months.
- CDC has clinical guidance available online. Please share and reinforce with providers/patients <https://www.cdc.gov/vaccines/vpd/shingles/hcp/shingrix/faqs.html>
- encourage timely administration of both doses whenever possible
- see attached documents with study results
- next year will have 10 year data on efficacy/immunity, then evaluate for any need for booster
