

COVID-19 SITE TEAM

Public Health Madison & Dane County

WHO WE WORK WITH

The Site Team works with sites such as businesses, schools, child care centers, and group living facilities that have two or more employees, attendees, or residents with COVID-19 during a two week time frame.

HOW WE CAN HELP

- A site investigator is assigned to each location. The site investigator works with the site to determine if COVID-19 is being spread from person to person at the site.
- The site investigator can answer questions for the site about how to prevent further spread, how to notify people who were exposed, and when people who were exposed or had COVID-19 can return to the site.
- The site investigator can't look up test results for a site or provide any personal health information about a person other than what's needed to make isolation and quarantine decisions.
- We work with sites until they've gone four weeks without a new case.

HOURS

- Site investigators are generally available Monday – Friday, 8:00 am – 4:30 pm.
